

GRAD-E1319: Governance and Politics of Artificial Intelligence**1. General information**

Course Format	Onsite
Instructor(s)	Joanna Bryson
Instructor's E-mail	bryson@hertie-school.org
Assistant (if applicable)	Ayamba Kwoyila: kwoyila@hertie-school.org
Instructor's Office Hours	Vary by the week due to her frequent public and policy engagements. Link to online sign up available from Moodle and through the assistant.

Link to [Study, Examination and Admission Rules and MIA, MDS and MPP Module Handbooks](#)

For information on **course room, times, and session dates**, please consult the [Course Schedule](#) on *MyStudies*.

Instructor Information:

Joanna Bryson is Professor of Ethics and Technology at the Hertie School. With broad academic expertise on intelligence, its nature, and its consequences, Bryson actively participates in technology policy making globally, but with particular foci on AI and the EU. Though educated primarily in the behavioural and computer sciences, Bryson's increasing engagement with policy makers and processes led her to the Hertie School, where she started 1 February 2020 (Brexit day). Five months later, in July 2020 she became one of Germany's nine appointees to the first cohort of experts for the G7 Global Partnership for AI. Previously, Bryson was Computer Science faculty at the University of Bath (2002-2019); she has also been affiliated with Harvard Psychology, Oxford Anthropology, Mannheim Social Science Research Centre, The Konrad Lorenz Institute for Evolution and Cognition Research, and the Princeton Center for Information Technology Policy. Bryson's PhD was on the systems engineering of AI, and she has long researched AI transparency (originally for AI development) as well as the biological utility and impacts of intelligence. During her PhD, she happened to observe confusion generated by anthropomorphised AI, leading to her first AI ethics publication "Just Another Artifact" in 1998. From this a thread of ethics and advocacy led to Bryson co-authoring the first national level AI ethics policy, the UK's 2010 Principles of Robotics, and from there to advising IEEE, OECD, Google, EU, and UN efforts (among others) on regulating AI. Bryson is a founding professor of Hertie's Centre for Digital Governance. Her present research interests include AI impacts on human cooperation and coordination, power and market impacts of transnational technology services and their regulation, and digital impacts on security, democracy,

and human understanding. Bryson holds two degrees each in psychology and AI (BA Chicago, MSc & MPhil Edinburgh, PhD MIT) and a *doctorats honoris causa* (Sciences and Architecture) from Université de Louvain.

2. Course Contents and Learning Objectives

Course contents:

Innovations in Technology — particularly Artificial intelligence (AI) — are transforming economies, societies, and security world-wide, increasingly leading to crisis-level governance quandaries, interdependencies, and political debate. AI is unusual even for a transformative technology, in that most if not all decision makers — leaders and ordinary citizens alike — come to it with preconceptions derived from fiction and popular culture. These preconceptions include misunderstandings rooted in everything from historical philosophy to contemporary disinformation campaigns. Meanwhile, the transformations of the information age alter the landscape of governance, both exposing as well as altering preexisting social and political issues – but also offering opportunities.

This course is intended to give a next generation of policy makers a firm grasp of both the fundamentals of AI regulation – what is possible and what is not – and a survey of present-day political debates and governance strategies. Establishing a clear scientific and data-led understanding of both AI and its present impacts, this course examines both options and obligations for individuals and our societies – corporations, governments, civil society, and other associations. We explore the deployment of data, algorithms, and infrastructure by all these entities, as well as issues of ethics, fairness, transparency, accountability, and power relations more generally. Such issues are again sometimes generated but often simply illuminated by the novelty of AI, where the term 'AI' includes but is not limited to machine learning and generative AI. We look at balances and interactions between regulation and innovation; security and freedom; the effects of AI on human labour, identity, and rights; economic stability, well-being, and security more generally. We consider the increasing oppressive capabilities of state- and non-state actors; and the increasing efficacy, logistical, and coordination capacities available to all. We consider both the politics and impacts of public and private strategies of regulation, observing the diverse current efforts at local, national, and transnational levels as exercised by governments, corporations, and other organisations. We also consider and observe efforts at regulatory evasion and disruption.

Learning objectives:

Students are introduced to a wide range of current debates concerning the deployment of AI throughout society, including the military. We examine corporate, local, national, and international policy, governance, and regulatory landscapes surrounding AI. Students learn to research, write, present and evaluate policy both as live presentations and in written briefs. These policy evaluations cover diverse perspectives on fast-moving and important issues. Concerns are not only the governance of technology itself, but of the local and transnational entities that produce it, and how societies at every level are altering with the digital age. The main learning objectives are broad introductory-level knowledge on relevant technological and governance topics, a capacity for critical thinking and policy construction, and a recognition of the varied ways in which graduates can expect to contribute to the policy, regulatory, and governance innovations that digital and intelligent technologies demand. Students can also expect to develop more advanced understandings of several specific topics they research (often in teams) for presentation.

Target group:

Anyone interested in: digital technology and technology policy; national, transnational, and corporate governance and politics around substantial matters of economics and security; debates

around the future of life and society; regulation and regulatory interference; and the role research and development – including that such as occurs in a policy school – can play in such debates.

Teaching style:

Lecture time is split more-or-less evenly between student-led discussions of course readings and contemporary events, and lectures based on the professor's real-world experiences in developing both AI technologies and technology policies both. We will also have at least one guest speaker: previous such have included senior national civil servants, leading civil society organisers and activists, alumnae with experience drafting national and EU policy, and technologists contributing to its implementation.

Prerequisites:

None, but those with less background in digital technology (or sciences more generally) may need to invest more time on some of the readings.

Diversity Statement:

Hertie School is committed to implementing a Diversity and Inclusion Strategy. In this course in particular, we strive to have an inclusive classroom, and ask for your informal feedback on inclusivity throughout the course. Course contents include the impacts of digital technology on diversity, inclusion, and biases at levels ranging from individual through the national and hemispheric. We also strive to take diverse opinions and national perspectives into account in the assigned readings, but these do draw primarily from peer-reviewed, English-language science, despite its historic demographic disparities. Students are encouraged to bring (and rewarded for bringing) other readings or national media reports to the attention of the class, particularly through their own in-class presentations, but also through the Moodle forums or in-class discussions.

3. Grading and Assignments

Policy on the use of AI tools for assignments

AI guidance specific to this class is in the section **Academic Integrity below**. The boiler plate advise still holds: Where AI tools are used, students are expected to clearly indicate how they were used and to ensure the originality and academic integrity of their work. **Students must include a Statement of Authorship in all written assignments.** Improper or undisclosed use of AI tools may be considered a violation of academic integrity policies. Please consult the course instructor in case of doubt. Further guidance is available in the [Artificial Intelligence Tools at the Hertie School - Teaching Guidelines for Instructors and Students](#), including a template for the **Statement of Authorship**, under section **1.1**.

Composition of Final Grade:

Assignment 0, 1, and 2: Discussant Slots (1 or 2, depending on class size), Discuss as part of group	Deadline: 0 (slot selection) before session 2, then as per your selection.	Survey on Moodle, slides uploaded to Moodle before session as single file, and brought to lecture as a single printout.	24 % (or 2x 12%)
---	---	--	------------------

Assignment 3: Persuasive policy brief (presentation + written note)	Deadline: 24 hours before session 11.	Slides and draft policy brief uploaded to Moodle folder (for your fellow students)	16% (by course mates)
Assignment 4: Feedback on Assignment 3	Deadline: Week after presentations (before lecture)	Submit via Moodle	30%
Assignment 5: Written policy brief	Deadline: Last Friday before Exams	Submit via Moodle (as group)	22%
Participation	Throughout course (distribution is good.)	Measured by participation on Moodle forums.	8 %

Assignment Details

The assessment for the course consists largely of policy research projects developed as groups and delivered in two different ways: collaborative policy briefings (assignment 1-3), and a collaborative written policy report (assignment 5). These projects are carried out in teams of approximately 3-4 students (individual submissions will not be accepted). Assignment 1 allows you to pick lecture topics in advance for assignments 1 and possibly 2 – see below. Selection is first come, first served, though you can try to negotiate to swap with classmates on a topic you are particularly interested in, or to join in on it for the final assignment. For the talks, individuals will work as a team, but be marked individually (see below.) Failure to sign up for or give a discussion cannot be retrieved; the mark is forfeit to 0. It is not fair for other students to ask to create larger teams in later weeks. Team composition for Assignment 3 will be initially allocated randomly but can be negotiated between peers (by swapping to work on a particular topic) after lecture 8. Assignment 4 is the only written individual assignment; it is short and may be thought of as a take-home exam. There is also a participation mark.

The aim of the assessments is four-fold:

- First, to provide you with the opportunity to apply the concepts learned in this class creatively, which helps you understand material more deeply and better retain it.
- Second, designing and working on a unique project in a team is something that you will encounter in the workplace, if you haven't already. The projects help you prepare for that. There's little single author work in the public sector, particularly at the intersection of technology and policy where you need a combination of relevant skills.
- Third, along with the opportunity to practice and the satisfaction of working creatively, students can use their projects to enhance their portfolio or resume, including possibly bringing strong projects forward for publication in blogs or more formal venues (working independently of class).

- Fourth, there is also a small peer assessment component of the course. This allows you to engage with others' work from a different perspective, provides a more comprehensive overview of the topics covered in the course, and (importantly) affords an opportunity for an individual mark based on in-class experience, not easily uploaded into an LLM.

In each of the assignments, you will need to concisely summarise the current state of scientific knowledge and policy practice in one specific domain where use of artificial intelligence is impacting society. Based on the current state of the art, you will formulate basic policy recommendations. These recommendations must be realistic and practical, taking into account everything you learnt at Hertie School (and beyond) about public policy and its making. Note that **policy briefs are not an exercise in advocacy**. Rather such documents should reflect objectively the best evidence on policies, presenting policy makers with clear arguments and concerns both for and against the ultimately recommended path, and allowing policy makers to make choices and informed tradeoffs. You must be clear in specifying sources of information, and confidence in its accuracy, as well as demonstrating the relevance and coherence of your work. Conveying the results of analysis clearly and concisely to policy makers is often the hardest part of policy research.

The assignments are designed not only to simulate the presentation of scientific evidence to policy makers in different ways, but also to help you and your course mates explore the policy space together. The outcomes are not only for a mark, but to support you in building both individual and cohort expertise. Learning who you might ask about what is an important part of any masters degree.

Style for the written policy brief: for Assignments 3 and 5, in terms of style (though not necessarily content), the UK's Parliamentary Office of Science and Technology (POST) note series offers a good example (<https://post.parliament.uk/type/postnote/>). Note that this course expects more academic citations than some POST notes contain. The length though is appropriate: no more than four 2-column pages of primary content, plus about one page of citations. Running a little over or under is OK, in keeping with Hertie School's usual 20% rule.

A note on referencing: Please in academic writing always use Harvard (Author, Year) referencing within text, or if you use footnotes (legal style), please put the complete citation in the first reference. This allows the reader to quickly recognise both common and unusual citations. Be sure to supply full academic references, not simple URLs.

Note that there is no "perfect project." While you are encouraged to be ambitious, the most important aspect of an academic assignment is your learning experience. Hence, you don't want to pick something that is too easy for you, but similarly, you don't want to choose a project that may be out of the scope of coursework. Quite evidently, you don't want to "write" something you don't understand or haven't verified; cf. Academic integrity guidance below. Again, the objective of this project is to provide you with hands-on practice and an opportunity to learn. Keep in mind that alumni of this course have gone on to make policy in exactly these areas.

Assignment 0

As pre-work before the second lecture of the course, students will be asked (through an online poll disseminated over Moodle) to choose one or two lecture topics for which they will be a discussant. Lectures two through nine will begin with a discussion of reading and events by two to four students – the exact number will be balanced and determined by class size.

If there are more than 16 students in a section taking the course for credit, each will discuss one topic, and their mark for that discussion will be duplicated for their assignment 2 mark. Otherwise, students are expected to sign up for **one of lecture 2-5, and another of lecture 6-9**.

Discussants will *each* give a brief report for *individual* marks for a total of 25 minutes, and then collectively lead discussion about the session's substance. Initial preparation should be based on the readings, although bringing in external references is rewarded.

Note: readings and possibly even lecture order are subject to change to reflect current events and/or available guest speakers. When you sign up before term, you are signing up for a topic, not necessarily a specific reading or week.

Assignment 1 (& 2)

Assignments one and two are the discussions per Assignment 0. A single week's presenters should coordinate to maximise the learning experience for other students by spreading attention among readings and/or perspectives, then work collectively on guiding the discussion at the end. Marks though are individual, and each slide shown should feature the delivering student's name at the bottom. Bringing in additional material from other courses or your own research or experience is excellent practice.

You should ensure someone in your group has uploaded your slides in advance of the lecture, and will bring a printout of your slides to give to the professor for ease of marking. Be sure to have your name on the bottom of each slide you present! Assignments will be graded and briefly commented on by the professor. Although marks are individual, they will tend to be clustered by the overall quality of the group's presentation, thus cooperation is a good strategy. Please see further comments on group work below.

Assignment 3

For the final policy research project, four or five randomised groups of no more than five students will be assigned. Subsequent bilateral or multilateral swapping is allowed, provided all affected group members agree. The project should focus on any of the governance or politics topics brought up in the course (including by students in class discussions), or possibly other related topics with permission of the instructor. The deliverable for this assignment is primarily a talk, but also a draft policy brief. The draft will be of the deliverable for assignment 5: a written four-page, two-column policy brief as described below.

Each group should not only identify a topic, but also a target body by whom the research is supposed to have been commissioned. Each talk should begin by the group informing the rest of the class what body they are meant to represent – for example, a particular ministry of a particular country, an NGO, UN panel, C suite, or so forth. Each paper should also clearly be branded with this information (Cover pages are allowed and do not count to the final page count.)

Care should be taken in ensuring that policies are analysed and delivered objectively and neutrally. Recommendations can be made, but only in terms of how to best achieved a particular outcome – the policy makers audience for the brief are the ones we expect to choose outcomes based on your research. The document as a whole cannot assume that outcome goals or priorities are already certainly known. Policy makers may have different, conflicting goals they will be balancing, and that balancing will be informed by your research. The exact length and format of the draft is unconstrained, but is not expected to exceed the length of the final version for Assignment 5.

For the mark for Assignment 3, all students will be asked to evaluate each project (other than their own). We will provide you with an evaluation form. Three components you might want to consider for your evaluations are: 1. Clarity and audience engagement of the presentation (don't spend too many words on this) 2. Quality and appropriateness of scientific evidence presented to the policy makers 3.

Feasibility of the policy recommendation(s). An average across all peer evaluations will be the group score for the presentation. These scores are then reviewed and possibly moderated by the professor to form the final Assignment 3 grade.

Note that assignments 3 and 5 are not for individual mark, so there are no external constraints on how or even whether you divide up your presentation time for assignment 3.

Assignment 4

As mentioned above, for Assignment 3, all students will be asked to evaluate each project other than their own. This mark is entirely individual, and the largest mark for this course. So in a way, you can think of this assignment as a “take home exam” for the course. Be sure to show you understand the course materials and remember the relevant course discussions.

You will be provided with an evaluation form where along with your score you provide brief, constructive criticism in a note of 300-500 words for each group. This mark should not only justify your score, but more importantly, give constructive feedback on the draft. Your grade will be based on the overall quality of your feedback, **particularly in how the policy recommendations reflect and engage with the contents of this course**. Referencing other course readings or in-class discussions is important – remember, this is a take-home exam on the course.

Note that your expected assigned median mark should be 85, though allowances are made for particularly strong or weak cohorts of talks. Comments will be due about a week after the presentations, but you are encouraged to do them quickly while the talks are fresh in your mind, though you are also encouraged to refer to the draft policy briefs.

Assignment 5

The final version of the policy brief is due the Friday before exams, giving you at least some time to take into account the suggestions of your peers, although doing so is **not** part of the marking criteria. The mark by the professor will be for the quality of the written policy brief, and will consider the same three criteria as you will yourselves be using in Assignment 4, but with no attention to the presentations, only the final briefs. In fact, Assignment 5 is marked before Assignment 4 to help judge the quality of the individual commentaries, yet sometimes individual feedback contains similar comments to the professor's, which unfortunately the group ignored. Nevertheless, the sole goal of the group is simply to write the best brief they possibly can. Your peers' advice will probably but of course not necessarily be of use to this goal.

Participation grade

Because the professor is very bad with faces and names, no participation marks are scored by in class discussion, though of course such discussion is very much appreciated, and sometimes feeds into things like letters of reference. Rather, the participation marks are for extending course discussions and bringing other evidence to light through the Moodle forums. This is to encourage students to ask their questions even when discussions run out of time, and to help the entire cohort keep up with events, tools, and findings in this rapidly changing topic. Students should though be considerate of each other's time and not post excessively, but should seek to bring in further readings, news, and/or briefly explained view points evenly spread 3-5 times over the period of the semester. Summarising a well-made point from a previous lecture for those not present (or so the professor can remember who said it) is also a good contribution. This is not a major mark, and is not expected to be much effort, but learning to be supportive, informative, and considerate in public and in-house social media is also an important professional skill. Marking is very coarse: 0, 50, 86, 96, for no, minimal or oversharing,

expected, and exceptional contributions, respectively. Marks are assigned after lectures and assignments conclude. Again: note that oversharing (including very long posts) can lead to reduced marks.

Communications with the professor: Note that Moodle is anyway the best place to ask questions concerning course content or assignments. Students are encouraged to help each other there. Personal questions not relating to course contents should however be brought up in office hours which can be arranged through a link on Moodle, or through the faculty assistant.

Late submission of assignments: For each day the assignment is turned in late, the grade will be reduced by 10% (e.g. submission two days after the deadline would result in 20% grade deduction).

Attendance: Students are expected to be present and prepared for each class session. Active participation during lectures and seminar discussions is essential. Please note that students may miss up to two sessions (out of twelve) if no course assignments are affected. **Students do not need to inform the course instructor(s) in advance if they are unable to attend a session.** For further information please consult the [Examination Rules](#) §10.

Academic Integrity: The Hertie School is committed to the standards of good academic and ethical conduct. Any violation of these standards shall be subject to disciplinary action. Plagiarism, misuse of AI, either free riding in or domination of group work, and other deceitful or antisocial actions are not tolerated. See [Examination Rules](#) §16, the Hertie [Plagiarism Policy](#), and [the Hertie Guidelines for Artificial Intelligence Tools](#). Students may use genAI responsibly to better inform themselves and to correct their English use and writing style, but should never use it as a substitute for their own understanding or creativity, including that it is not advised to use it for reading summary – learning to skim is a far more useful skill. See further [Generative AI Use and Human Agency](#), guidance written by the professor.

Compensation for Disadvantages: If a student furnishes evidence that he or she is not able to take an examination as required in whole or in part due to disability or permanent illness, the Examination Committee may upon written request approve learning accommodation(s). In this respect, the submission of adequate certificates may be required. See [Examination Rules](#) §14.

Extenuating circumstances: An extension can be granted due to extenuating circumstances (i.e., for reasons like illness, personal loss or hardship, or caring duties). In such cases, please contact the course instructor and Examination Office *in advance* of the assignment deadline. Note that most work in this course is group work, so contacting other students in the group can be at least as important as contacting the professor.

4. General Readings

This course reflects active policy matters changing by the day. No single textbook can therefore be used for this course, though general introductions to AI are available in the library. Readings draw instead primarily from a large number of recent articles across multiple disciplines. Pre reading some of these is advisable, particularly those flagged in the readings for the first assignment. You may also want to read two policy-related Wired articles by Bryson from 2022 (note: she didn't get to pick the titles):

- One Day, AI Will Seem as Human as Anyone. What Then?
<https://www.wired.com/story/lamdasantience-psychology-ethics-policy/>

- Europe Is in Danger of Using the Wrong Definition of AI
<https://www.wired.com/story/artificialintelligence-regulation-european-union/>

As optional pre- or Summer reading, consider also:

- Schaake, Marietje. "The tech coup: How to save democracy from Silicon Valley." Princeton University of Press, 2025). This is really about the topics of this course.
- Olson, Parmy. Supremacy: AI, ChatGPT and the race that will change the world. Pan Macmillan UK, 2024. This is more about personalities and to some extent the development process, and touches on the politics. In times of extreme inequality, personalities do matter to politics too.

4. Course Sessions and Readings

All course readings can be accessed on the course Moodle page.

Session 1: What is Artificial Intelligence?	
Required Readings	• Please do explore https://artificialintelligenceact.eu/ and assess its content and political intentions (but don't necessarily read the full act.) • Joanna J. Bryson, The Artificial Intelligence of the Ethics of Artificial Intelligence: An Introductory Overview for Law and Regulation. solicited and reviewed for M. Dubber, F. Pasquale, & S. Das (Eds.) 2020. • "The Legal Rule That Computers Are Presumed to Be Operating Correctly-Unforeseen and Unjust Consequences." Digital Evidence & Elec. Signature L. Rev. 19 (2022): 123. https://journals.sas.ac.uk/deeslr/article/view/5476 • Statement on Inclusive and Sustainable Artificial Intelligence for People and the Planet. https://www.elysee.fr/en/emmanuel-macron/2025/02/11/statement-on-inclusive-and-sustainable-artificial-intelligence-for-people-and-the-planet • Three Fallacies: Alondra Nelson's Remarks at the Elysée Palace on the Occasion of the AI Action Summit https://www.techpolicy.press/three-fallacies-alondra-nelsons-remarks-at-elyse-palace-on-the-occasion-of-the-ai-action-summit/ • https://fortune.com/2024/07/24/ai-new-steel-spillover-risks-overcapacity-investing-finance-artificial-intelligence-tech/?abc123

Optional Readings	• AI chatbots lose money every time you use them. That is a problem. By Will Oremus, Washington Post 5 June 2023 https://www.washingtonpost.com/technology/2023/06/05/chatgpt-hidden-cost-gpu-compute/ • Kroll, J. A., Barocas, S., Felten, E. W., Reidenberg, J. R., Robinson, D. G., _ Yu, H. (2016). Accountable algorithms. University of Pennsylvania Law Review, 165 (3), 633. • One Hundred Year Study on Artificial Intelligence (Stanford, 2016): Read Preface (pp. 1-3), Sections I, II, and III (pp. 12-49); Appendix I (pp. 50-52), for those who would like a short history of AI • Study finds AI assistants help developers produce code that's more likely to be buggy https://www.theregister.com/2022/12/21/ai_assistants_bad_code/ Thomas Claburn, The Register, 21 December 2022. (Consider reading the linked studies too.) • https://www.commerce.senate.gov/2024/12/cruz-calls-out-potentially-illegal-foreign-influence-on-u-s-ai-policy • Yoshua Bengio et al. Managing extreme AI risks amid rapid progress. Science 384, 842-845 (2024). DOI:10.1126/science.adno117 • UN AI Advisory Body, Final Report – Governing AI for Humanity, September 2024. https://www.un.org/en/ai-advisory-body (we come back to this later in semester.)
--------------------------	---

Session 2: The Systems Engineering of AI, Including Machine Learning (ML)

Required Readings	• Raji, I.D. and Buolamwini, J., 2019, January. Actionable auditing: Investigating the impact of publicly naming biased performance results of commercial ai products. In Proceedings of the 2019. AAAI/ACM Conference on AI, Ethics, and Society (pp. 429-435). • Melanie Mitchell. 2019. Artificial Intelligence: A Guide for Thinking Humans. Chapters 4, 8, 11. pre-reading • "Human-level play in the game of Diplomacy by combining language models with strategic reasoning." Science (2022): eadeg097. File • AI Is a Lot of Work, Josh Dzieza, The Verge 2023
--------------------------	---

Optional Readings	• The Friendship That Made Google Huge, James Somers, The New Yorker, December 03, 2018. • Shanahan, M., McDonell, K. & Reynolds, L. Role play with large language models. Nature (2023). https://doi.org/10.1038/s41586-023-06647-8URL • Thomas, M. "The millennium bug was real—and 20 years later we face the same threats." The Guardian (2019). • Classification in the Wild: The Science and Art of Transparent Decision Making, By Konstantinos V. Katsikopoulos, Özgür Şimşek, Marcus Buckmann and Gerd Gigerenzer. • Gigler, Björn-Sören, and Savita Bailur, eds. Closing the feedback loop: Can technology bridge the accountability gap? The World Bank, 2014. https://openknowledge.worldbank.org/handle/10986/18408 • Computer programming (2nd term, first year) lecture notes https://jjb.conjugateprior.org/here/CM10228/course-sched.html • Planetary Motion: The History of an Idea That Launched the Scientific Revolution https://earthobservatory.nasa.gov/features/OrbitsHistory
--------------------------	---

Session 3: Politics, Governance, and Fairness: Bias in AI, ML, and Data

Required Readings	• Aylin Caliskan, Joanna J. Bryson, and Arvind Narayanan, Semantics derived automatically from language corpora contain human biases. <i>Science</i> 356 (6334)183-186. • <i>Be sure to also look at the supplement, which gives the stimuli and shows similar results for a different corpus and word-embedding model.</i> • Melanie Mitchell, Artificial intelligence learns to reason. <i>Science</i> 387, eadw5211 (2025). https://www.science.org/doi/10.1126/science.adw5211 • FEDERAL COURT RULES AGAINST IDAHO MEDICAID PROGRAM; SEPTEMBER 7, 2023 https://www.acluidaho.org/en/press-releases/federal-court-rules-against-idaho-medicaid-program • Related (optional): U.S. Congress to Hear Testimony about ACLU Idaho Medicaid Lawsuit Media Contact Jeremy Woodson, May 15, 2023 at least one (the other two become optional) of: • Pair, E, N Vicas, A Weber, V Meausoone, J Zou, A Njuguna, and G L Darmstadt. "Quantification of gender bias and sentiment towards political leaders over 20 years of Kenyan news using NLP." <i>Frontiers in psychology</i> (2021): 5822. • Avery, Mallory and Leibbrandt, Andreas and Vecchi, Joseph, Does Artificial Intelligence Help or Hurt Gender Diversity? Evidence from Two Field Experiments on Recruitment in Tech (February 14, 2023). URL • Landy, David, Brian Guay, and Tyler Marghetis. "Bias and ignorance in demographic perception." <i>Psychonomic bulletin & review</i> 25 (2018): 1606-1618
Optional Readings	• Gebru, Timnit, and Émile P. Torres. "The TESCREAL bundle: Eugenics and the promise of utopia through artificial general intelligence." <i>First Monday</i> (2024). • Emily M. Bender, Timnit Gebru, Angelina McMillan-Major, and Shmargaret Shmitchell. 2021. On the Dangers of Stochastic Parrots: Can Language Models Be Too Big? In Conference on Fairness, Accountability, and Transparency (FACCT '21). • "How we Analyzed the COMPAS Recidivism Algorithm" by Jeff Larson, Surya Mattu, Lauren Kirchner and Julia Angwin (ProPublica, 2016) https://www.propublica.org/article/howwe-analyzed-thecompas-recidivism-algorithm. • "Big Data: A Report on Algorithmic Systems, Opportunity, and Civil Rights," pp. 1-18, 22-24 (White House, May 2016). • Benjamin, Ruha. "Race after technology: Abolitionist tools for the new jim code." <i>Social Forces</i> (2019). • Three very different sources of bias in AI, and how to fix them (short blogpost by JJBryson from 2017) • On Analogy-Making in Large Language Models Melanie Mitchell 2023 blogpost (or read her whole blog!)

Session 4: Abuse of AI, Privacy, Identity, & Democracy

Required Readings

- Chapter 4, *Madness visible: A memoir of war*, by Janine di Giovanni. •
 - Chapter Four as a PDF File
- Martin Beraja, Andrew Kao, David Y Yang, Noam Yuchtman, *Altocracy*, *The Quarterly Journal of Economics*, Volume 138, Issue 3, August 2023, Pages 1349–1402URL
- Does Social Media cause Polarization? Evidence from access to Twitter Echo Chambers during the 2019 Argentine Presidential Debate Rafael Di Tella, Ramiro H. Gálvez & Ernesto Schargrodsky
- Theocharis, Y., Cardenal, A., Jin, S., Aalberg, T., Hopmann, D. N., Strömbäck, J., Castro, L., & more (2023). Does the platform matter? 9 Social media and COVID-19 conspiracy theory beliefs in 17 countries. *New Media & Society*, 25(12), 3412-3437.File
- Twitter Files: Former CEO Jack Dorsey calls attacks on former colleagues dangerous, *Tech Desk of the Indian Express* 14 December 2022.
 - See also Dorsey's post on the Wayback Machine (Musk apparently bought & deleted the blog site less than a month after this was posted!)
- Russia recruits sympathizers online for sabotage in Europe, officials say *Washington Post* By Souad Mekhennet, Catherine Belton, Emily Rauhala and Shane Harris July 10, 2024 at 9:11 a.m. EDT

Optional Readings	• Is Democracy Failing?: A Primer for the 21st Century, Niheer Dasandi, Thames & Hudson, 2018. • Wylie, Christopher. Mindf*ck: Inside Cambridge Analytica's plot to break the world.
